Requesting Transcranial Magnetic Stimulation (TMS) office information

Physician's name:	Phone number:
Office manager name:	Phone number:
Office address:	

Outpatient practitioner's information (if different from TMS physician)

Psychiatrist's name:	Phone number:
Therapist's name:	Phone number:

Please check all that apply:

<input type="checkbox"/> Request is for TMS of the brain.
<input type="checkbox"/> Individual is an adult.
<input type="checkbox"/> Individual has a confirmed diagnosis of severe major depressive disorder (MDD) single or recurrent episode.
<input type="checkbox"/> TMS is requested for treatment of a disorder other than severe MDD.
If checked, please specify disorder:
<input type="checkbox"/> Individual has failed to significantly respond to prior treatment.
<input type="checkbox"/> Individual has had four trials of psychopharmacologic agents in the current depressive episode.
<input type="checkbox"/> Treatment trials have included at least two different agent classes, at or above the minimum effective dose and duration.
<input type="checkbox"/> Treatment trials have included at least two evidence-based augmentation therapies. <ul style="list-style-type: none"> • Augmentation therapy: A drug regimen consisting of one or more drugs, which are not antidepressant drugs, added to increase the efficacy of an antidepressant drug in an adult with MDD. An example would be to add Pindolol to Fluoxetine.
<input type="checkbox"/> Individual is unable to tolerate psychopharmacologic agents as evidenced by four trials with distinct side effects.

<input type="checkbox"/> Individual has a history of responses to TMS in a previous depressive episode.
<input type="checkbox"/> If individual has a history of TMS, there was a greater than 50% improvements in the individual's symptoms as evidenced by a standard rating scale that reliably measures depressive symptoms. If checked, please mark the rating scale used to document the individual's symptoms: <ul style="list-style-type: none"><input type="checkbox"/> Beck Depression Inventory (BDI)<input type="checkbox"/> Geriatric Depression Scale (GDS)<input type="checkbox"/> Hamilton Depression Rating Scale (HAMD)<input type="checkbox"/> Inventory of Depressive Symptomology-Systems Review (IDS-SR)<input type="checkbox"/> Montgomery-Asberg Depression Rating Scale (MADRS)<input type="checkbox"/> Personal Health Questionnaire Rating Scale (PHQ-9)<input type="checkbox"/> Quick Inventory of Depressive Symptomology (QUDS)
<input type="checkbox"/> Individual is currently receiving electroconvulsive therapy (ECT), and TMS is considered less invasive.
<input type="checkbox"/> Individual is a candidate for and has declined ECT, and TMS is considered a less invasive treatment option.
<input type="checkbox"/> Individual has had a trial of an evidence-based psychotherapy known to be effective in the treatment of MDD. If checked, please mark which of the following apply: <ul style="list-style-type: none"><input type="checkbox"/> Psychotherapy trial had an adequate frequency and duration.<input type="checkbox"/> Psychotherapy trial did not result in a significant improvement in depressive symptoms.
<input type="checkbox"/> Individual's depressive symptoms were documented by a standardized rating scale that reliably measures depressive symptoms. If checked, please mark the rating scale used to document their symptoms: <ul style="list-style-type: none"><input type="checkbox"/> Beck Depression Inventory<input type="checkbox"/> Geriatric Depression Scale<input type="checkbox"/> Hamilton Depression Rating Scale<input type="checkbox"/> Inventory of Depressive Symptomology-Systems Review<input type="checkbox"/> Montgomery-Asberg Depression Rating Scale<input type="checkbox"/> Personal Health Questionnaire Depression Scale<input type="checkbox"/> Quick Inventory of Depressive Symptomology
<input type="checkbox"/> TMS will be administered by a U.S. Food and Drug Administration (FDA) approved device for the treatment of MDD in a safe and effective manner according to the manufacturer's manual. If checked, specify device:
<input type="checkbox"/> The treatment course will not exceed the following specified stimulation parameters: 5 days a week for 6 weeks (total of 30 sessions), followed by a 3-week taper of treatments; 3 TMS treatments the first week, 2 TMS treatments the following week, and 1 TMS treatment in the last week.
<input type="checkbox"/> Individual has a seizure disorder or history of seizure (except those induced by ECT or isolated febrile seizures in infancy without subsequent treatment or recurrence).
<input type="checkbox"/> Individual has acute or chronic psychotic symptoms or disorders (such as schizophrenia, schizophreniform, or schizoaffective disorder) in the current depressive episode.
<input type="checkbox"/> Individual has a neurological condition(s) that includes epilepsy, cerebrovascular disease, dementia, increased intracranial pressure, having a history of repetitive or severe head trauma, or primary or secondary tumors in the central nervous system (CNS).

Individual has an implanted magnetic-sensitive medical device located less than or equal to 30 centimeters from the TMS magnetic coil or other implanted metal items **Note:** Dental amalgam fillings are not affected by the magnetic field and are acceptable for use with TMS.
 If checked, please mark the following if it applies to the individual:

- A cochlear implant
- Implanted cardioverter defibrillator (ICD)
- Pacemaker
- Vagus nerve stimulator (VNS)
- Metal aneurysm clips or coils, staples, or stents
- Other device not listed:

List all current ICD-10 diagnoses:

Specific focus of treatment for this member

For the current episode of depression, list the medication trials:

Medication antidepressants	Date of trial	Maximum dose	Duration of trial	Outcome, side-effects, other relevant info

If assessed for ECT, why is ECT not being utilized?

List psychotherapy trials and outcomes (indicate model of psychotherapy used):

What standardized rating scale of depression was used?

What were the results (score/range):

The FDA and manufacturer’s user manual specify stimulation parameters of 5 days per week for 6 weeks (total of 30 sessions), followed by a 3-week taper; 3 treatments the first week, 2 treatments the following week, and 1 treatment the last week. Is the proposed treatment consistent with these parameters? Yes No
 What is the number of units per week?

Is this a request for maintenance TMS treatment? Yes No
 If so, what is the date of the most recent treatment received?

You may also submit any additional information relevant to your request for authorization, such as a copy of the TMS intake evaluation or any full psychiatric evaluation done within a 3-month period from the requested start of treatment.

By signing below, you are confirming that the information you have provided on this form is accurate and complete based on your clinical assessment of the patient and the records available to you as of the date of this request.
